

TREETINO

**The Future of Energy
Rooted in Sustainability**

www.treetino.eu

Problems We Are Solving

Energy independence

Especially since the Ukraine war companies across EU lost trust in their governments to provide consistent and well priced energy. There is also growing demand for off-grid systems

Lack of space

Many companies have already all of the available space covered with solar panels. Some would have to invest millions into strengthening their roofs for solar panels. Wind turbines usually can't get approved because of regulators and neighbors.

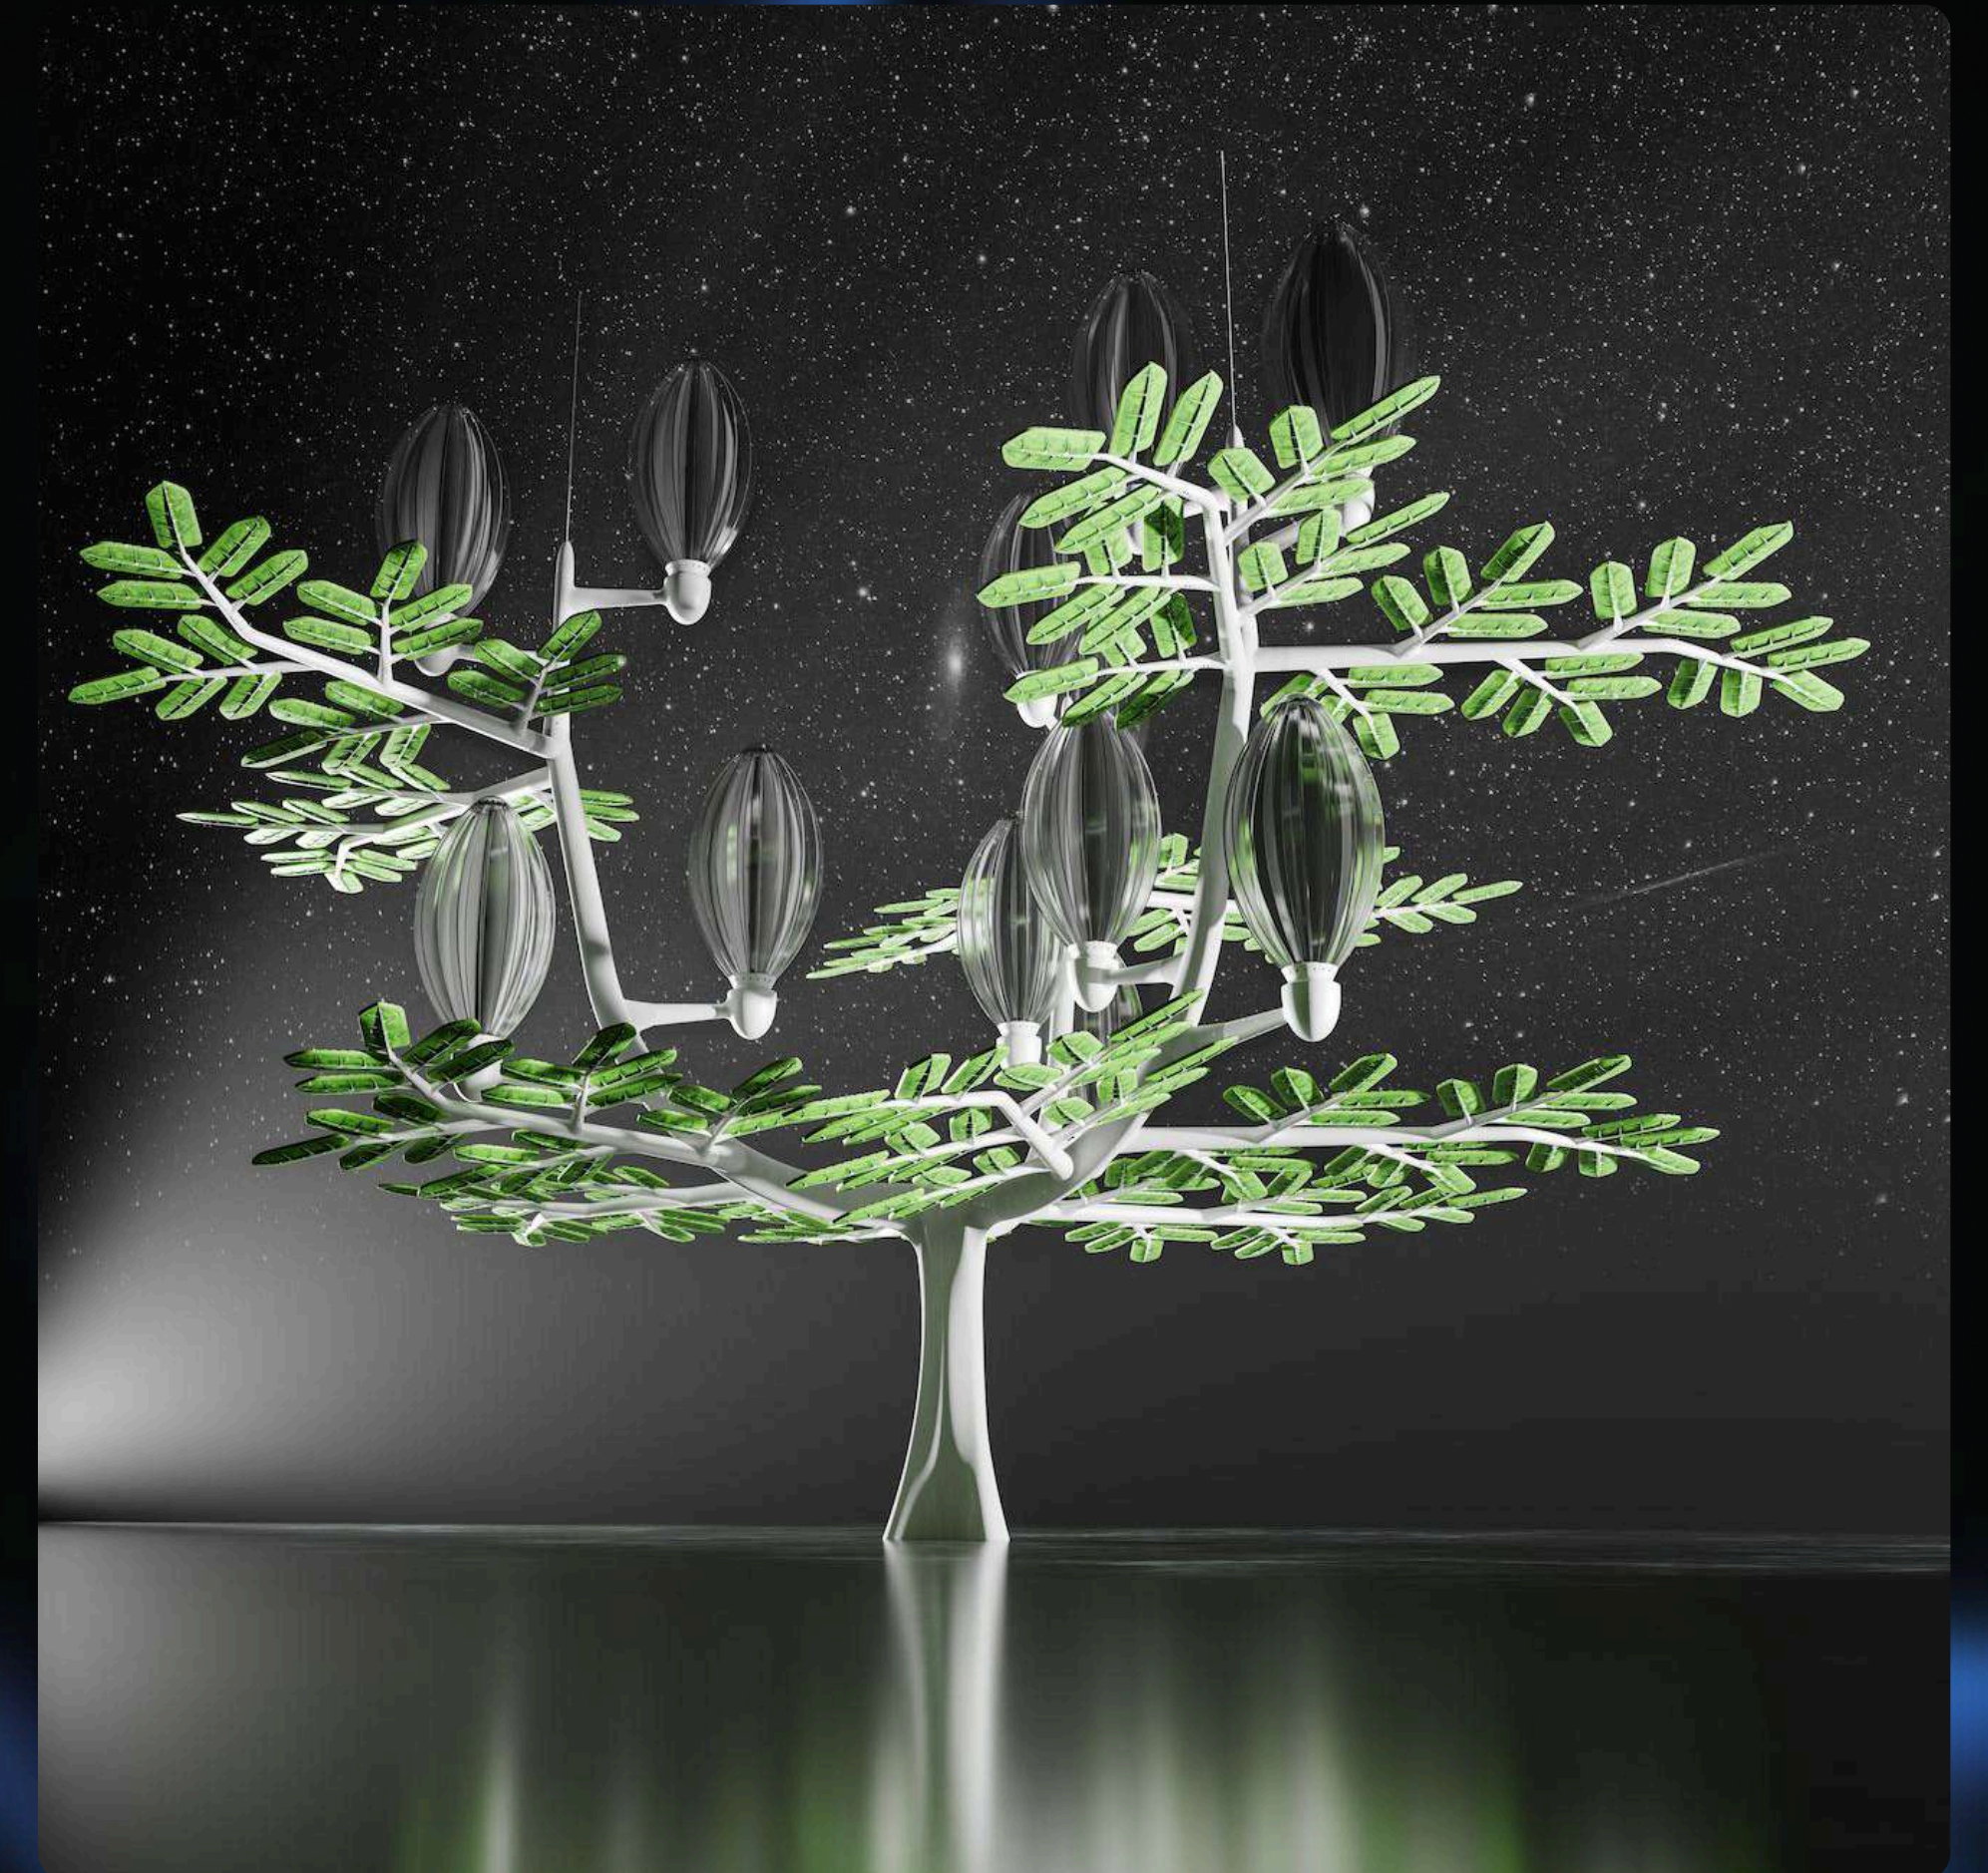

Lack of economical alternatives

High-end urban companies, like modern corporations and banks, lack a visible way to showcase their green thinking. Our tree is a visually bold testament to sustainability and ESG values.

Our Solution

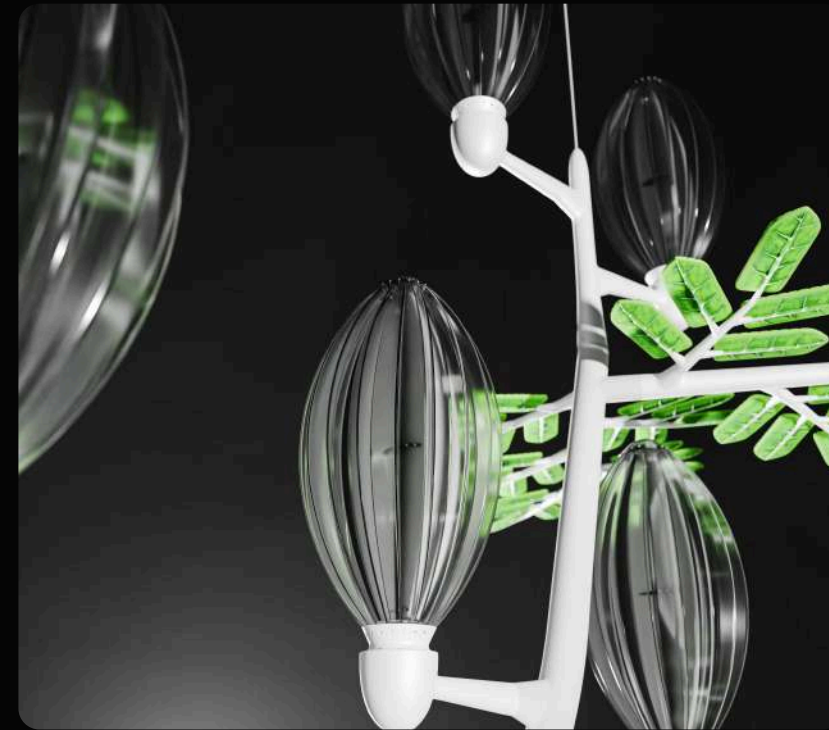

Treetino transforms
underutilized space into
sustainable revenue
generating asset

Numbers

300 leaves

12 turbines

49kW power

400M² saved

1M² footprint
