TREETINO

Treetino × Tapaya · Partnership outline · 2026

Tap a card.
Charge a car.

How Treetino and Tapaya can bring unattended card payments to Europe’s EV chargers.

It's raining.
Your battery is at 4%.
The charger wants an app.

Download. Register. Add a card. Find signal. Every EV driver in Europe knows this moment.

EU regulation · AFIR

Europe made card payment the law.

Apr 2024

New fast chargers (≥50 kW) must accept cards

Jan 2027

Existing fast chargers on main corridors must retrofit

No app

Ad-hoc payment, no account, no registration

Online payments are easy. Outdoor EV ones aren't.

QR codes & car-wash readers

Built for the wrong job.

- QR codes fail in the rain and aren't allowed ≥50 kW
- Car-wash bricks (Nayax, Payter) do fixed-price pulses
- €400–600 extra hardware brick + monthly telemetry fees

What an EV charger actually needs

Metered, single-screen pay.

- Pre-auth hold, live kWh metering, exact capture on unplug
- One display for both the charger UI and the card tap
- Instant multi-party split (site host, CPO, investor)

Car-wash bricks do pulses.
Shop terminals need a clerk.
EV charging needs both worlds.

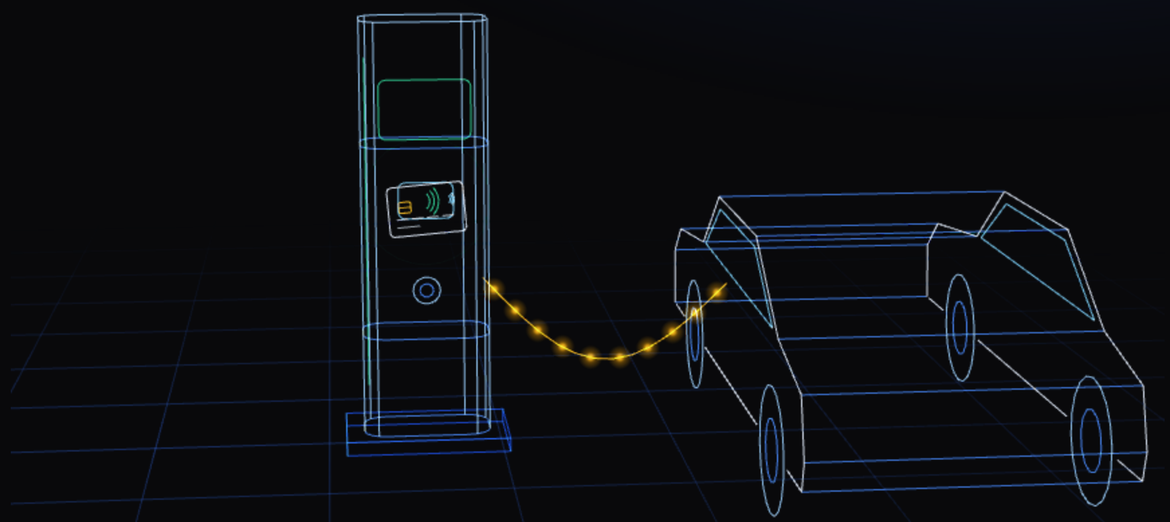

Today, charger makers bolt a dumb €500 payment brick next to a separate screen. One smart Android terminal replaces both.

Treetino × Tapaya

Let's close the gap together.

Tapaya's regulated payment rails inside Treetino's tree-shaped charger. One product, launched together — starting with one school in Prague.

Tap. Charge.
Pay for exactly what you used.

Tap

Any card or phone, small hold

Charge

Every kWh read live

Unplug

Exact amount, rest released

Built at The FinTechers Hackathon

We already built it. In 30 hours.

Live metering

Every kWh read from the charger as it flows

Instant payout

The site owner is paid the moment the car unplugs

The hardware

Proven hardware. A tree around it.

SUNMI — the Xiaomi-backed Android POS maker — ships through Tapaya with the payment app preinstalled. One screen replaces both the charger HMI and a separate payment brick; Tapaya confirms the PCI PTS outdoor model.

Screen & reader

SUNMI Android display, contactless reader at hand height

Payment brain

Tapaya Accept SDK — hold, live top-ups, exact capture

Meter link

OCPP / Victron — the terminal knows every kWh

Enclosure

Sealed, vandal-resistant housing inside the trunk

Brand

White-label screen in the host's colours

What Treetino brings

The charger.
And where it goes.

01

The product

A tree-shaped solar EV charger people stop to photograph. Payment flow already built.

02

Distribution

23+ MW delivered by our energy arm. €705k signed, €3.4M in letters of intent.

03

Revenue-share partners

Partners like peaq run other unattended outdoor assets that split revenue per tap. Same rails, more devices.

04

A first site

A Prague school we work closely with. Ready to go live within weeks.

First installation · Prague

First tree.
First taps.
At a school.

The site is being built right now. Real cards, real cars, real data — within weeks, not years.

What Tapaya brings

The rails.
And the right doors.

01

Regulated payments

PCI MPoC SoftPOS. Visa, Mastercard and Amex. Acquiring and merchant onboarding.

02

SUNMI hardware

Channel partner of the Xiaomi-backed POS maker. Devices arrive ready to take cards.

03

Fintech network

Mastercard Lighthouse. Nets Baltics partnership. Backed by Passion Capital.

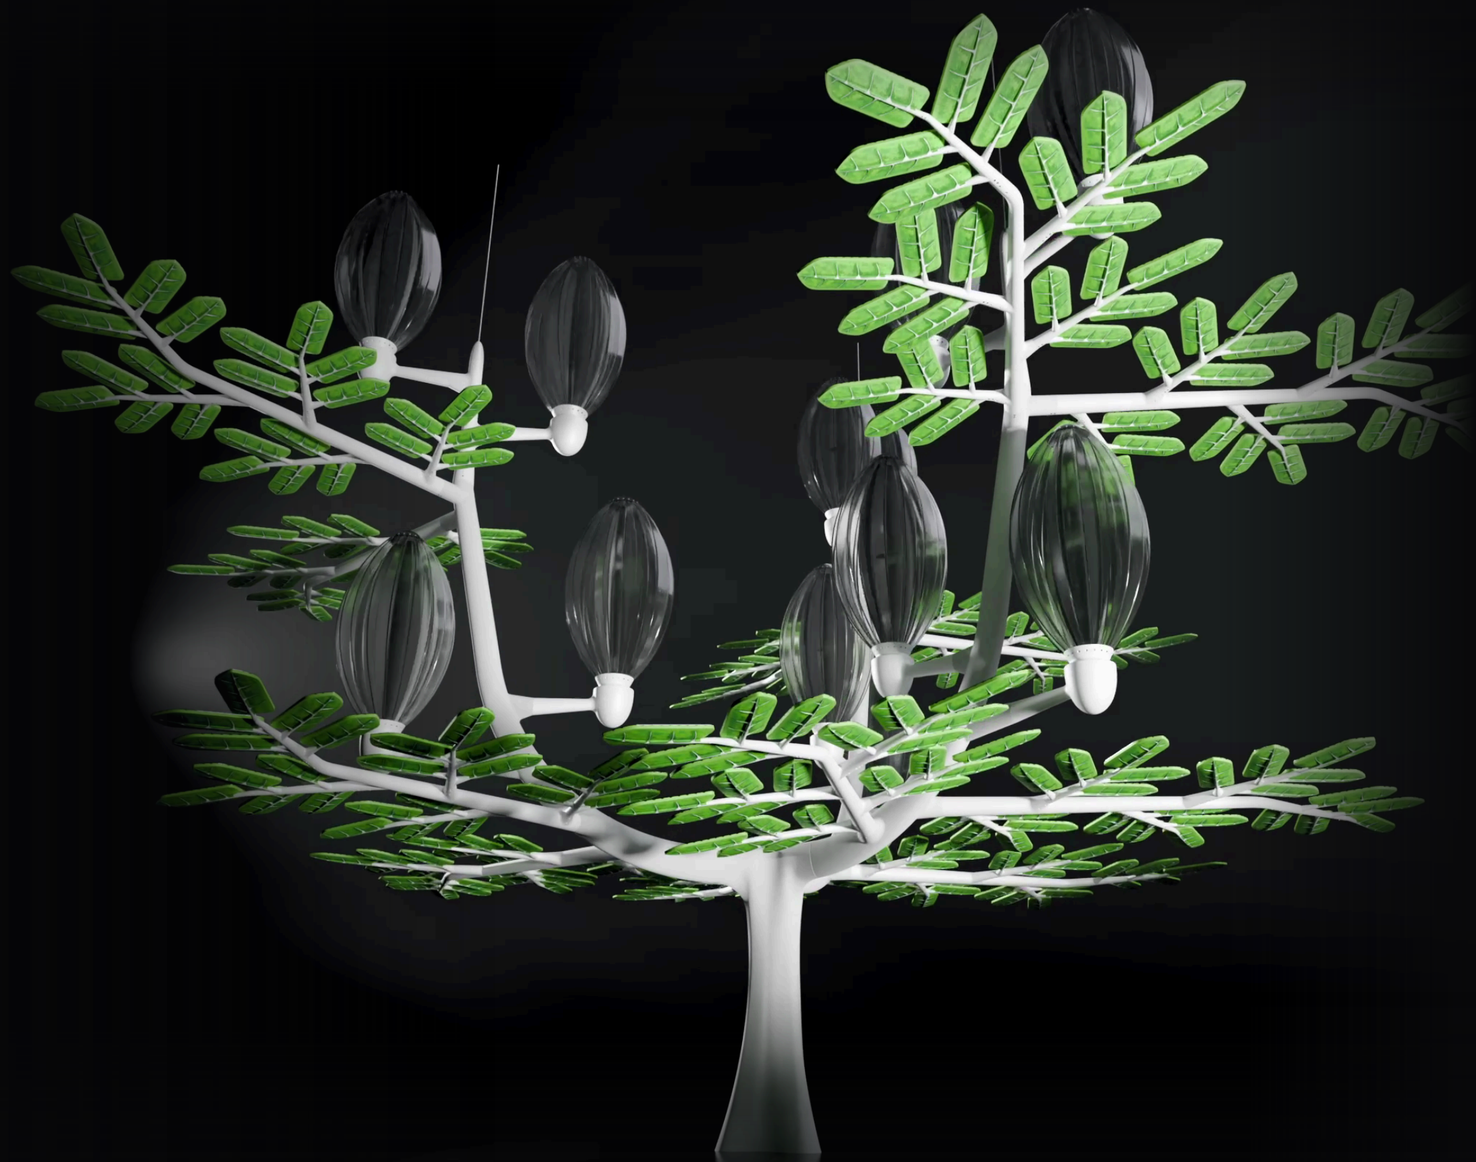

04

Visa relationship

Close contacts for scheme approval of unattended EV — and for co-marketing.

Co-marketing · with Visa, via Tapaya

A tree that takes Visa.

Visa — a contactless story at the charger

Tapaya — a flagship unattended reference

Treetino — a charger every host wants

The market

Small at home.
Huge across Europe.

7,574
Public points in Czechia (3,738 stations · ČEZ 1,000+, PRE 928)

1.15M
Public charging points across the EU (81% AC, 19% DC)

1.7 / day
Avg. sessions per station (ČEZ 600k+ & PRE 565k in 2025)

≈330 Kč
Avg. ad-hoc session: ~24 kWh (ČEZ ’25/’26) × ~14 Kč

At 330 Kč per session, ≈ €31M–€62M a year flows through Czechia’s public network (from 1.7/station today to 1.7/point) — and ≈ €4.7B–€9.4B across Europe’s.

The split · move the sliders

How every tap is shared.

Chargers 100

First school | Year one | 10% of Czechia | 1% of the EU

Sessions per charger, per day 1.7

Average session 330 Kč

Visa / Mastercard + acquiring 0.75%

Tapaya 1.0%

Treetino 1.0%

Card volume per year

20.5M Kč €819.1K

Of every 100 Kč tapped, the site owner keeps 97.3 Kč

The 2.8% fee pool, zoomed in

Treetino	204.8K Kč	€8.2K
Tapaya	204.8K Kč	€8.2K
Visa / Mastercard + acquiring	153.6K Kč	€6.1K
Site owner — energy & margin	19.9M Kč	€796.5K

Starting assumptions for discussion. Scheme + acquiring cost depends on card mix (EU interchange capped at 0.2% debit / 0.3% credit, plus scheme and processing fees). 1 € = 25 Kč.

More revenue, same partnership

The tap is just the beginning.

01

Hardware

Terminal and enclosure kits sold per bay, with a margin for both of us.

02

Premium branding

Custom screen, colours and trunk branding for hosts and sponsors. Monthly tier.

03

Installation

Mounting, wiring and commissioning by our own energy crews. Per site.

04

PRE & ČEZ retrofit

Tap-to-pay for chargers already standing in their networks. No new tree needed.

Indicative structure — pricing and shares to be agreed together.

Treetino × Tapaya · traction to date

Neither of us is starting from zero.

Treetino

- **€705k signed** · 3× V1 delivering to MKovo, 2× V2 in construction
- **€3.4M in LOIs** · from a single expo, backed by CzechInvest & SIC
- **23+ MW delivered** · MoU signed with peaq Ironyard for Prague hub

Tapaya

- **€1M pre-seed** · led by Passion Capital with DEPO Ventures & BADideas
- **3 channels live** · PCI MPoC SoftPOS, SUNMI terminals & online gateway
- **Mastercard Lighthouse** · plus Nets Baltics deal across 3 countries

The plan

From one school to every charger.

Nov 2026

Pre-approval

Visa / Mastercard check, terminal availability, SDK integration

Dec – Jan

First tree live

The Prague school. Real cards, first sessions, first story

Spring 2027

Certified & public

Outdoor-certified terminal. Visa co-marketing launch

H2 2027

Czech scale

PRE / ČEZ retrofit pilot. First 50 chargers across Czechia

2028

Europe

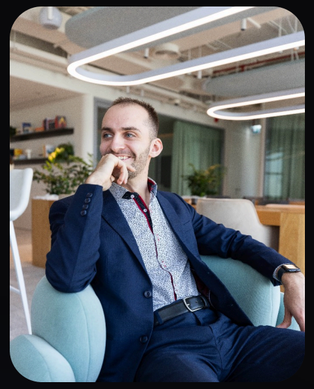

Roll out through Tapaya's markets

Honest expectations

The first six months are about proof.

Treetino commits to	Tapaya commits to	Success by spring
Integrate the SDK and metering	Scheme pre-approval for EV	One tree taking real cards
Build, install and run the first tree	Source the outdoor terminal	A signed revenue split
Bring sites, partners and crews	Onboard sites, run acquiring	Next sites and Visa lined up

We've built both halves of this before.

Payments · CTO

Jakub Lustyk

Shipped card payments that open physical doors across Czech schools and cities.

Energy · CEO

Dominik Mašek

Built 23+ MW of energy and EV charging infrastructure in Central Europe.

First sites already signed

€705k contracts

€3.4M letters of intent

TREETINO

Let's plant the first one.

Next: intro with Monika · terminal availability · scheme pre-approval · a date at the school

Jakub Lustyk · Dominik Mašek
